

Social Media Apps Programming

jQuery Mobile / Phonegap

1031SMAP08
TLMXM1A (8687) (M2143) (Fall 2014)
(MIS MBA) (2 Credits, Elective) [Full English Course]
Thu 8,9 (15:10-17:00) V201

Min-Yuh Day, Ph.D.
Assistant Professor

Department of Information Management
Tamkang University

<http://mail.tku.edu.tw/myday>

Course Schedule (1/3)

- | Week | Date | Subject/Topics |
|------|------------|---|
| • 1 | 2014/09/17 | Course Orientation and Introduction to Social Media and Mobile Apps Programming |
| • 2 | 2014/09/24 | Introduction to Android / iOS Apps Programming |
| • 3 | 2014/10/01 | Developing Android Native Apps with Java (Eclipse) (MIT App Inventor) |
| • 4 | 2014/10/08 | Developing iPhone / iPad Native Apps with Swift / Objective-C (XCode) |
| • 5 | 2014/10/15 | Mobile Apps Using HTML5/CSS3/JavaScript |
| • 6 | 2014/10/22 | jQuery Mobile |

Course Schedule (2/3)

- | Week | Date | Subject/Topics |
|------|------------|--|
| • 7 | 2014/10/29 | Create Hybrid Apps with Phonegap |
| • 8 | 2014/11/05 | jQuery Mobile/Phonegap |
| • 9 | 2014/11/12 | jQuery Mobile/Phonegap |
| • 10 | 2014/11/19 | Midterm Exam Week
(Midterm Project Report) |
| • 11 | 2014/11/26 | Case Study on Social Media Apps
Programming and Marketing in
Google Play and App Store |
| • 12 | 2014/12/03 | Google Cloud Platform |

Course Schedule (3/3)

Week	Date	Subject/Topics
• 13	2014/12/10	Google App Engine
• 14	2014/12/17	Google Map API
• 15	2014/12/24	Facebook API (Facebook JavaScript SDK) (Integrate Facebook with iOS/Android Apps)
• 16	2014/01/31	Twitter API
• 17	2015/01/07	Final Project Presentation
• 18	2015/01/14	Final Exam Week (Final Project Report)

Outline

- jQuery Mobile/PhoneGap
 - HTML5, CSS3, JavaScript
 - jQuery Mobile
 - PhoneGap
 - PhoneGap Build
 - index.html, css, js, png
 - config.xml
- Demo
 - Create Hybrid Apps with PhoneGap
 - Testing iOS and Android Devices

Overview

Start here if you are new to Cordova. Includes installation and next steps.

Platform Guides

Set up each platform SDK and update projects.

Icons and Splash Screens

Customize your app's displaying images.

Privacy Guide

Learn about important mobile privacy issues.

Storage

An overview of native storage options.

Platform Support

Compatibility table for all major features.

Using Plugman to Manage Plugins

Manage plugins without the CLI when using the platform-centered workflow.

Embedding WebViews

Implement the Cordova WebView in your native project.

Security Guide

Information and tips for building a secure application.

Next Steps

A look at topics that new Cordova developers will encounter.

The Command-Line Interface

Create, build, and deploy from the command-line.

The config.xml File

Customize your app's features.

Plugin Development Guide

Develop your own plugin.

Whitelist Guide

Grant an application access to external resources.

Keyword Index

PhoneGap API: Camera

PhoneGap API Documentat x

docs.phonegap.com/en/2.9.0/cordova_camera_camera.md.html#Camera

PhoneGap Documentation 2.9.0

Camera

Camera

Quick Example

Take a photo and retrieve it as a base64-encoded image:

```
navigator.camera.getPicture(onSuccess, onFail, { quality: 50,
  destinationType: Camera.DestinationType.DATA_URL
});

function onSuccess(imageData) {
  var image = document.getElementById('myImage');
  image.src = "data:image/jpeg;base64," + imageData;
}

function onFail(message) {
  alert('Failed because: ' + message);
}
```

Take a photo and retrieve the image's file location:

```
navigator.camera.getPicture(onSuccess, onFail, { quality: 50,
  destinationType: Camera.DestinationType.FILE_URI });

function onSuccess(imageURI) {
  var image = document.getElementById('myImage');
  image.src = imageURI;
}

function onFail(message) {
  alert('Failed because: ' + message);
}
```

Full Example

```
<!DOCTYPE html>
```

PhoneGap API: Geolocation

PhoneGap API Documentat x

docs.phonegap.com/en/2.9.0/cordova_geolocation_geolocation.md.html#Geolocation

PhoneGap Documentation 2.9.0

Geolocation

Geolocation

Quick Example

```
// onSuccess Callback
// This method accepts a Position object, which contains the
// current GPS coordinates
//
var onSuccess = function(position) {
  alert('Latitude: '    + position.coords.latitude          + '\n' +
        'Longitude: '   + position.coords.longitude         + '\n' +
        'Altitude: '    + position.coords.altitude          + '\n' +
        'Accuracy: '    + position.coords.accuracy          + '\n' +
        'Altitude Accuracy: ' + position.coords.altitudeAccuracy + '\n' +
        'Heading: '     + position.coords.heading           + '\n' +
        'Speed: '       + position.coords.speed             + '\n' +
        'Timestamp: '   + position.timestamp                + '\n');
};

// onError Callback receives a PositionError object
//
function onError(error) {
  alert('code: '      + error.code    + '\n' +
        'message: '   + error.message + '\n');
}

navigator.geolocation.getCurrentPosition(onSuccess, onError);
```

Full Example

```
<!DOCTYPE html>
<html>
  <head>
    <title>Device Properties Example</title>

    <script type="text/javascript" charset="utf-8" src="cordova-x.x.x.js"></script>
    <script type="text/javascript" charset="utf-8">

      // Wait for device API libraries to load
      //
      document.addEventListener("deviceready", onDeviceReady, false);
```

PhoneGap API: Storage

The screenshot shows a web browser displaying the PhoneGap API documentation for the Storage API. The browser's address bar shows the URL: docs.phonegap.com/en/2.9.0/cordova_storage_storage.md.html#Storage. The page title is "Storage". On the left, there is a navigation menu with "API Reference" selected, and a list of API categories including Accelerometer, Camera, Capture, Compass, Connection, Contacts, Device, Events, File, Geolocation, Globalization, InAppBrowser, Media, Notification, Splashscreen, Storage, and Guides. The main content area is titled "Storage" and contains a list of supported platforms, a "Quick Example" code block, and a "Full Example" code block.

App Distribution on App Store

About App Distribution

This guide contains everything you need to know to distribute an app through the App Store or Mac App Store.

- Get step-by-step guidance for enrolling in an Apple Developer Program and building, testing, and submitting your app.
- Configure services that are available only to apps submitted to the App Store or Mac App Store.
- Test your app on multiple devices and system versions, or offer testers a preview of your next release.
- Upload metadata about your app so the store can present it to customers.
- Verify that you've prepared your app correctly, and submit it to the store.
- Learn how to release and maintain your app after submission.

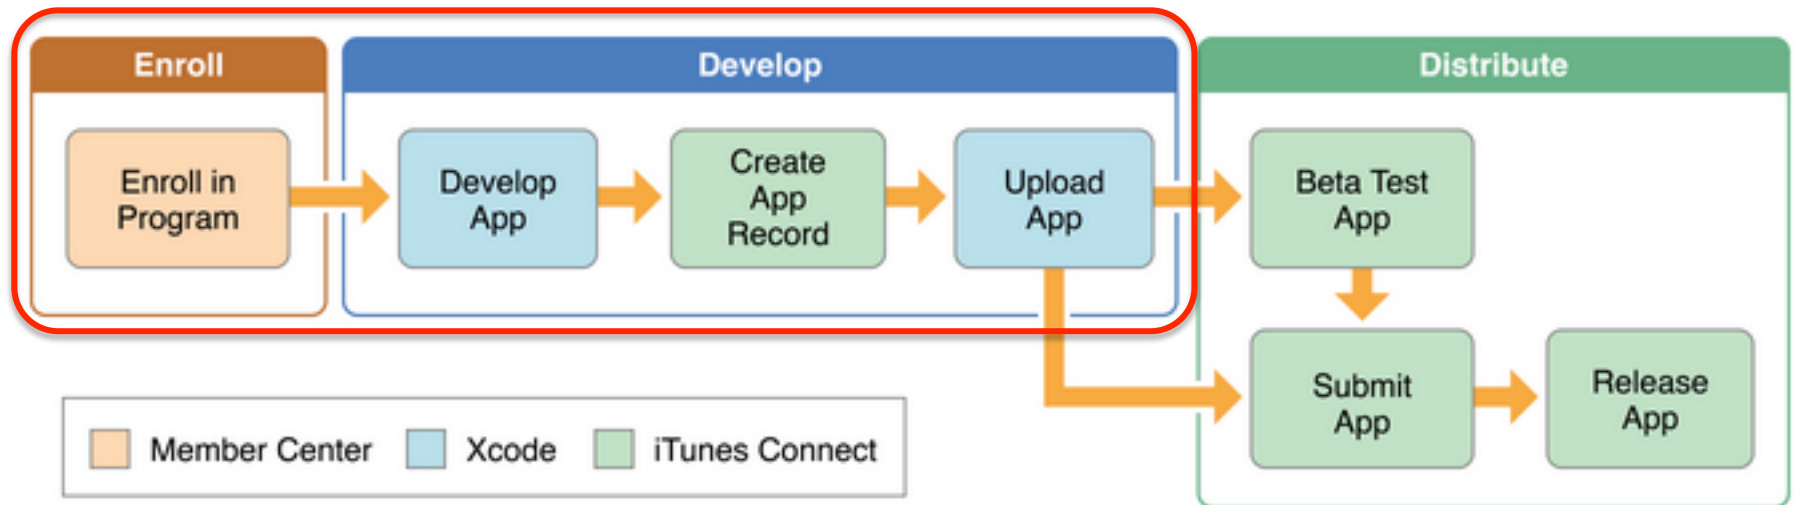

Enroll (Member Center) → **Develop** (Xcode) → **Distribute** (iTunes Connect)

The flowchart shows the following steps:

- Enroll in Program (Member Center)
- Develop App (Xcode)
- Create App Record (iTunes Connect)
- Upload App (Xcode)
- Beta Test App (iTunes Connect)
- Submit App (iTunes Connect)
- Release App (iTunes Connect)

Note: If you just want to use Xcode to run an app on a device or write code that uses a service, read [App Distribution Quick Start](#) first and then return to this document for additional tasks you'll perform throughout the lifetime of your app.

Test on iOS Devices (iPhone/iPAD)

The screenshot shows the Apple Developer portal interface. At the top, there's a navigation bar with 'Developer' and links for 'Technologies', 'Resources', 'Programs', 'Support', and 'Member Center'. A search bar is on the right. Below the navigation, the page title is 'Certificates, Identifiers & Profiles' with a user name 'Day Min Yuh'. The main content area is titled 'iOS Devices' and features a '+', a list icon, and a search icon. A central white box contains an image of an iPad and iPhone, followed by the heading 'Getting Started with iOS Devices'. Below this, there are three sections: 'To install apps and pre-release versions of iOS on a development device, you must first register that device using its unique device identifier (UDID).', 'Register Devices with Xcode' (describing the easiest way to register), and 'Register Devices Manually' (describing how to register multiple devices).

Getting Started with iOS Devices

To install apps and pre-release versions of iOS on a development device, you must first register that device using its unique device identifier (UDID).

Register Devices with Xcode
Xcode is the easiest way to register your iOS device. Connect your device to your Mac and click Use for Development in Xcode's Organizer window. Sign in with the Apple ID associated with your iOS Developer Program membership and Xcode will register the UDID of your device to your iOS development team.

Register Devices Manually
If you wish to upload multiple device IDs, team agents and admins can [manually register devices](#).

Apple iOS Developer Program

Enrolling in Apple Developer Programs

Get everything you need to develop and distribute apps for iOS and OS X.

It's easy to get started.

- ✓ **Choose an enrollment type.**
Individual: choose this option if you are an individual or sole proprietor/single person business.

Company/Organization: choose this option if you are a company, non-profit organization, joint venture, partnership, or government organization.
- ✓ **Submit your information.**
Provide basic personal information, including your legal name and address. If you're enrolling as a company/organization, we'll need a few more things, like your legal entity name and D-U-N-S® Number, as part of our verification process.
- ✓ **Purchase and activate your program.**
Once we verify your information, you can purchase your program on the Apple Online Store. After you have completed your purchase, we'll send you an email within 24 hours on how to activate your membership.

Are you enrolling as an individual or organization?

Individual

Select this option if you are an individual or sole proprietor/single person company.

Seller Name
Your personal legal name will be listed as the seller of your apps on the App Store.
Example:
Seller: John Smith

Individual Development Only
You are the only one allowed access to program resources.

You will need:

- A valid credit card for purchase.
We may also require additional personal documentation to verify your identity.

Company/Organization

Select this option if you are a company, non-profit organization, joint venture, partnership, or government organization.

Seller Name
Your organization's legal entity name will be listed as the seller of your apps on the App Store.
Example:
Seller: ABC Company, Inc.

Development Team
You can add additional developers to your team who can access program resources. Companies who have hired a contractor to create apps for distribution on the App Store should enroll with their company name and add the contractors to their team.

You will need:

- The legal authority to bind your company/organization to Apple Developer Program legal agreements.
- An address for the company's principal place of business or corporate headquarters.

Assigning Team Roles

You can manage team members, assign roles to existing members, or invite others to join your team.

- ✓ **Managing Developer Roles in the Member Center**
The Member Center is where you can manage your development team, which can include up to 200 students. Team roles are used to assign certain responsibilities to a developer. While students can be added only as Team Members, faculty and staff are intended to assume the Admin role in order to be able to invite additional team members, approve digital certificates, create provisioning profiles, and more. iOS Certificates

Getting Started with iOS Certificates

You will need to set up digital certificates to develop and distribute iOS apps. To install your app on a development device or submit it to the App Store, it must first be signed with an Apple-issued certificate. Certificates allow the system to identify who signed the app.

Request Certificates with Xcode

Xcode is the easiest way to request certificates. Connect your device to your Mac and click Use for Development in Xcode's Organizer window. Sign in with the Apple ID associated with your iOS Developer Program membership and Xcode will automatically generate your certificates.

Request Certificates Manually

To request certificates, upload a [Certificate Signing Request](#) from your Mac.

 **About Creating a Certificate Signing Request (CSR)**

To manually generate a Certificate, you need a Certificate Signing Request (CSR) file from your Mac. To create a CSR file, follow the instructions below to create one using Keychain Access.

Create a CSR file.
In the Applications folder on your Mac, open the Utilities folder and launch Keychain Access.

Within the Keychain Access drop down menu, select Keychain Access > Certificate Assistant > Request a Certificate from a Certificate Authority.

- In the Certificate Information window, enter the following information:
 - In the User Email Address field, enter your email address.
 - In the Common Name field, create a name for your private key (e.g., John Doe Dev Key).
 - The CA Email Address field should be left empty.
 - In the "Request is" group, select the "Saved to disk" option.
- Click Continue within Keychain Access to complete the CSR generating process.

Cancel Back **Continue**

Upload CSR file (CertificateSigningRequest)

The screenshot shows the 'Add iOS Certificate' page in the Apple Developer portal. The page is titled 'Certificates, Identifiers & Profiles' and is for user 'Day Min Yuh'. The main heading is 'Add iOS Certificate'. Below the heading is a progress bar with four steps: 'Select Type', 'Request', 'Generate', and 'Download'. The 'Generate' step is currently active. The main content area has a sub-heading 'Generate your certificate.' and a paragraph explaining that Keychain Access generates a public and private key pair when a CSR is created. Below this is the instruction 'Upload CSR file. Select .certSigningRequest file saved on your Mac.' and a 'Choose File...' button. At the bottom of the page are 'Cancel', 'Back', and 'Generate' buttons. The left sidebar contains navigation links for 'iOS Apps', 'Certificates', 'Identifiers', 'Devices', and 'Provisioning Profiles'.

com.myDomain.myApp

The screenshot shows the Apple Developer portal interface. At the top, there's a navigation bar with 'Developer' and various links like 'Technologies', 'Resources', 'Programs', 'Support', and 'Member Center'. Below this is a search bar and a user profile 'Day Min Yuh'. The main content area is titled 'Certificates, Identifiers & Profiles'. On the left, there's a sidebar with a dropdown menu set to 'iOS Apps' and several sections: 'Certificates' (All, Pending, Development, Production), 'Identifiers' (App IDs, Pass Type IDs, Website Push IDs), 'Devices' (All), and 'Provisioning Profiles' (All). The 'App IDs' section is selected. The main content area displays 'iOS App IDs' with a '+', a list icon, and a search icon. Below this is a large white box with a grey 'ID' icon and the heading 'Getting Started with iOS App IDs'. The text explains that an App ID is a string defining a keychain identity and a set of apps. It includes sections for 'Register App IDs with Xcode' and 'Register App IDs Manually'.

Apple ID

Bundle ID

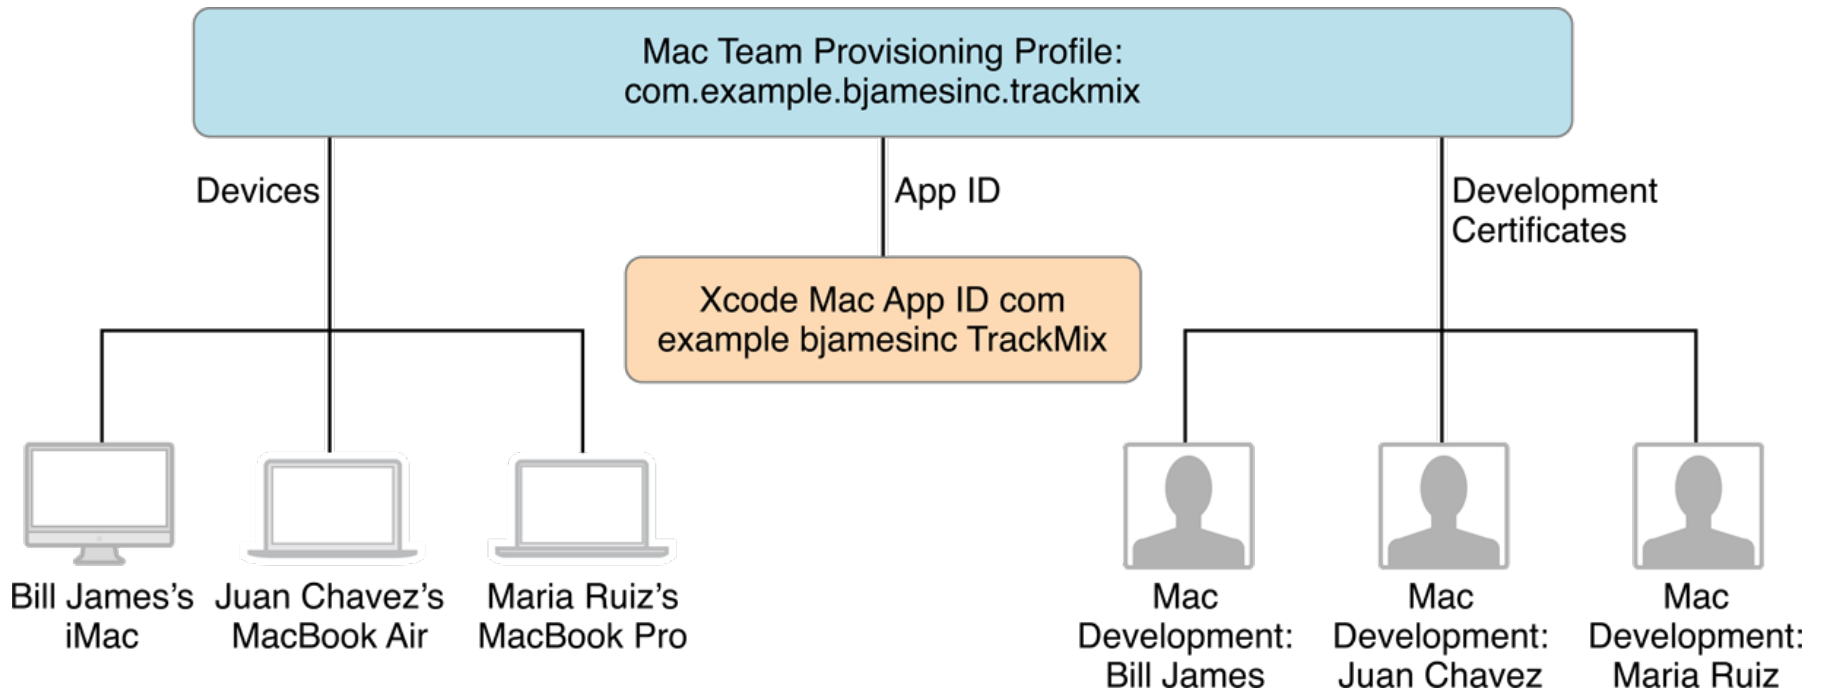

Bundle ID vs. App ID

App ID, Device ID

App ID, Device ID

iOS App ID

The screenshot shows the Apple Developer website interface. At the top, the browser address bar displays the URL: `developer.apple.com/account/ios/identifiers/bundle/bundleLanding.action`. The page title is "iOS App IDs - Apple Developer". The main navigation bar includes "Technologies", "Resources", "Programs", "Support", and "Member Center", along with a search bar labeled "Search Developer".

The page content is titled "Certificates, Identifiers & Profiles" and is personalized for "Day Min Yuh". A sidebar on the left contains a navigation menu with the following sections:

- iOS Apps** (dropdown menu)
- Certificates**
 - All
 - Pending
 - Development
 - Production
- Identifiers** (highlighted with a red box)
 - App IDs** (highlighted with a red box)
 - Pass Type IDs
 - Website Push IDs
- Devices**
 - All
- Provisioning Profiles**
 - All

The main content area is titled "iOS App IDs" and features a large "ID" icon. The primary heading is "Getting Started with iOS App IDs".

Getting Started with iOS App IDs

An App ID is a string that defines both a keychain identity and a set of apps you are developing. Its primary use is as part of a provisioning profile; it specifies which apps are authorized by the profile to be signed and launched.

Register App IDs with Xcode

When you use Xcode to automatically provision your devices, you will receive a wildcard App ID by default. This App ID can be used for all of your iOS apps that do not require app services such as push notifications, iCloud, Game Center, In-App Purchase, Data Protection, and Passbook.

Register App IDs Manually

Team agents and admins can manually register App IDs and enable them for app services. [Register your App ID.](#)

Register iOS App ID

Registering an App ID

The App ID string contains two parts separated by a period (.)—an App ID Prefix that is defined as your Team ID by default and an App ID Suffix that is defined as a Bundle ID search string. Each part of an App ID has different and important uses for your app. [Learn More](#)

App ID Suffix

Explicit App ID

If you plan to incorporate app services such as Game Center, In-App Purchase, Data Protection, and iCloud, or want a provisioning profile unique to a single app, you must register an explicit App ID for your app.

To create an explicit App ID, enter a unique string in the Bundle ID field. This string should match the Bundle ID of your app.

Bundle ID:

We recommend using a reverse-domain name style string (i.e., com.domainname.appname). It cannot contain an asterisk (*).

Wildcard App ID

This allows you to use a single App ID to match multiple apps. To create a wildcard App ID, enter an asterisk (*) as the last digit in the Bundle ID field.

Bundle ID:

Example: com.domainname.*

Bundle ID:

We recommend using a reverse-domain name style string (i.e., com.domainname.appname). It cannot contain an asterisk (*).

Wildcard App ID

This allows you to use a single App ID to match multiple apps. To create a wildcard App ID, enter an asterisk (*) as the last digit in the Bundle ID field.

Getting Started with iOS Devices

To install apps and pre-release versions of iOS on a development device, you must first register that device using its unique device identifier (UDID).

Register Devices with Xcode

Xcode is the easiest way to register your iOS device. Connect your device to your Mac and click Use for Development in Xcode's Organizer window. Sign in with the Apple ID associated with your iOS Developer Program membership and Xcode will register the UDID of your device to your iOS development team.

Register Devices Manually

If you wish to upload multiple device IDs, team agents and admins can [manually register devices](#).

iOS Provisioning Profiles

+ [] 🔍

Getting Started with iOS Provisioning Profiles

Provisioning profiles allow you to install apps onto your iOS devices. A provisioning profile includes signing certificates, device identifiers, and an App ID. Development provisioning profiles are used to build and install versions of your app during the development cycle, while distribution provisioning profiles are used to submit your apps to the App Store and distribute them to beta testers.

Generate Provisioning Profiles with Xcode

Xcode is the easiest way to create an iOS provisioning profile. Connect your device to your Mac and click Use for Development in Xcode's Organizer window. Sign in with the Apple ID associated with your iOS Developer Program membership and Xcode will generate a provisioning profile containing your certificate and device identifier.

Generate Provisioning Profiles Manually

Team agents and admins can [manually generate profiles](#).

Add iOS Provisioning Profile

Select Type Configure Generate Download

Select App ID.

If you plan to use services such as Game Center, In-App Purchase, and Push Notifications, or want a Bundle ID unique to a single app, use an explicit App ID. If you want to create one provisioning profile for multiple apps or don't need a specific Bundle ID, select a wildcard App ID. Wildcard App IDs use an asterisk (*) as the last digit in the Bundle ID field. Please note that iOS App IDs and Mac App IDs cannot be used interchangeably.

Certificates.p12

The screenshot shows the Adobe PhoneGap Build web interface. A file selection dialog is open, displaying the 'Downloads' folder. A file named 'Certificates.p12' is highlighted with a red box. A red arrow points from this file to the 'certificate (p12) file' field in the 'iOS' configuration section, which also has a red box around it. The 'iOS' section shows 'No key selected' and 'No file chosen' for the certificate. Other sections for Android and Windows are also visible, each with 'Rebuild' and 'OTA install' buttons. The background interface includes a 'Myday Mobile App' header, a 'Builds' table, and a 'Feedback' button on the left.

phonegap.js

Removing Unnecessary Files

Once you've included the necessary assets, remove the `phonegap.js` (`cordova.js`) as Build will automatically inject it during compile time.

Why must you delete the `phonegap.js`?

PhoneGap requires a different JavaScript file for each platform and using an incompatible `phonegap.js` will result in errors when running your application.

Making Sure You can Still Access the PhoneGap API

Once you've deleted the `phonegap.js` you'll need to make sure that your application can still access the PhoneGap API.

To do so, simply ensure that the following reference is made in your `index.html`

```
<script src="phonegap.js"></script>
```

Usage and Additional Information:

Unless otherwise specified in a config.xml, each platform will try to use the default `splash.png` during compilation. To define platform specific splash screens please use the guide provided below.

Splash files should be the file formats specified in the examples below. Any other file type is not guaranteed to work across platforms.

Warning:

If you do not supply the `gap:platform` attribute, the referenced image will be copied to ALL platforms, increasing the size of their application packages.

Default

The default splash must be named `splash.png` and must reside in the root of your application folder.

```
<gap:splash src="splash.png" />
```

iOS

We support classic, retina, iPhone 5 and iPad displays; the following will define splash screens for each of those. Standard iPads have two different splash screens, portrait, landscape. Retina iPads have two additional splash screens, retina portrait and retina landscape (PhoneGap 2.5.0+ only).

```
<gap:splash src="splash/ios/Default.png" gap:platform="ios" width="320"  
height="480" />
```

icon.png (128x128)

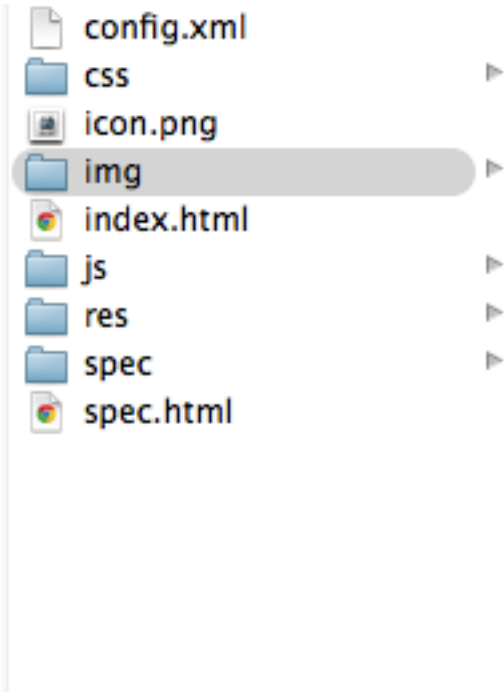

```
<icon src="icon.png" />
```

screen-mdpi-portrait.png

(320x480)

The screenshot shows the Android Studio interface. On the left, a file browser displays a list of folders: android, bada, bada-wac, blackberry, ios, tizen, webos, and windows-phone. The 'android' folder is selected. In the center, a list of files is shown, including screen-hdpi-landscape.png, screen-hdpi-portrait.png, screen-ldpi-landscape.png, screen-ldpi-portrait.png, screen-mdpi-landscape.png, screen-mdpi-portrait.png (highlighted), screen-xhdpi-landscape.png, and screen-xhdpi-portrait.png. Below this list, four resolution options are listed: 200x320, 320x480, 480x800, and 720x1280. On the right, a preview window shows the selected image, which is a printer icon. Below the preview, the following metadata is displayed: Name: screen-mdpi-portrait.png, Kind: Portable Network Graphics..., Size: 29 KB.

```
<gap:splash gap:density="mdpi" gap:platform="android" src="res/  
screen/android/screen-mdpi-portrait.png" />
```
