Building Android Apps with HTML, CSS, and JavaScript: Making Native Apps with Standards-Based Web Tools, Jonathan Stark & Brian Jepson, O’reilly, 2012

Building iPhone Apps with HTML, CSS, and JavaScript: Making App Store Apps Without Objective-C or Cocoa, Jonathan Stark, O’reilly, 2010
Learn HTML5 and JavaScript for iOS

This site features a series of examples for every chapter. Look at the site on your desktop, iPad or iPhone as you read the book. Click "View Source" in your browser or go to the Apress download zip to see the source code for each example.

What you see in the book might only be part of the code needed to demonstrate an idea or concept, but this site has everything you need, like additional JS, or CSS, or rendered HTML.

The Real World Example Site

www.grandviewave.com/m

The Grandview Avenue site was written in 2010 and continues to evolve. It's a real site designed to give local businesses an app and mobile site presence.

Each chapter in the book ends with a section called "Putting It All Together", in which I show you how I apply the concepts in the chapter to this real world application.

Hopefully you can see how this site works and either build one like it yourself, or do something completely different.

```

What is HTML?

- HTML is a language for describing web pages.
  - HTML stands for **Hyper Text Markup Language**
  - HTML is a **markup** language
  - A markup language is a set of markup **tags**
  - The tags **describe** document **content**
  - HTML documents contain HTML **tags** and plain **text**
  - HTML documents are also called **web pages**

```html
<!DOCTYPE html>
<html>
  <head>
    <meta charset="UTF-8">
    <title>My Title</title>
  </head>
  <body>
    Hello World
  </body>
</html>
```

HTML Tag, Element, Attribute

HTML Element

<title>My Title</title>

<p>This is a paragraph.</p>

<tagname>content</tagname>
HTML Tag, Element, Attribute

HTML Element

<title>My Title</title>

Tag
Start Tag
Opening Tag

Tag
End Tag
Closing Tag
HTML Tag, Element, Attribute

<meta charset="UTF-8">
What is HTML5

• HTML5 is The New HTML Standard
  – What HTML5 is Not
• The new HTML5 structural elements and attributes
• The new HTML5 form input types and attributes
What HTML5 is Not

• It’s Not XHTML
  – `<div id=container>This is a div<br></div>
  – `<div id="container">This is another div<br/></div`

• It’s Not HTML4+1

• HTML5 is Not Just Markup
  – Not just tags
  – It’s also a set of JavaScript APIs
    • Provide a richer user experience
HTML5 is The New HTML Standard

Imagination, meet implementation. HTML5 is the cornerstone of the W3C’s open web platform; a framework designed to support innovation and foster the full potential the web has to offer. Heralding this revolutionary collection of tools and standards, the HTML5 identity system provides the visual vocabulary to clearly classify and communicate our collective efforts.

Giving meaning to structure, semantics are front and center with HTML5. A richer set of tags, along with RDFa, microdata, and microformats, are enabling a more useful, data driven web for both programs and your users.

Source: [http://www.w3.org/html/logo/](http://www.w3.org/html/logo/)
HTML5 is The New HTML Standard

Source: http://www.w3schools.com/html/html5_intro.asp
HTML5 is The New HTML Standard

- New Elements
- New Attributes
- Full CSS3 Support
- Video and Audio
- 2D/3D Graphics
- Local Storage
- Local SQL Database
- Web Applications

Source: http://www.w3schools.com/html/html5_intro.asp
With HTML5, playing video and audio is easier than ever.

- HTML5 <video>
- HTML5 <audio>

```html
<!DOCTYPE HTML>
<html>
<body>

<video width="320" height="240" controls>
  <source src="movie.mp4" type="video/mp4">
  <source src="movie.ogg" type="video/ogg">
  Your browser does not support the video tag.
</video>

</body>
</html>
```

HTML5 Graphics

With HTML5, drawing graphics is easier than ever:

• Using the `<canvas>` element
• Using inline SVG
• Using CSS3 2D/3D

Source: http://www.w3schools.com/html/html5_intro.asp
With HTML5, web application development is easier than ever.

- Local data storage
- Local file access
- Local SQL database
- Application cache
- Javascript workers
- XHR 2

Source: http://www.w3schools.com/html/html5_intro.asp
Semantic Elements

HTML5 Forms

• Semantic Elements
  – New elements for headers, footers, menus, sections, and articles.

• HTML5 Forms
  – New form elements,
  – new attributes,
  – new input types,
  – automatic validation.

Source: http://www.w3schools.com/html/html5_intro.asp
HTML5 uses CSS3

• New **Selectors**
• New Properties
• Animations
• 2D/3D Transformations
• Rounded Corners
• Shadow Effects
• Downloadable Fonts

<!DOCTYPE html>
<html>
  <head>
    <meta charset="UTF-8">
    <title>My Title</title>
  </head>
  <body>
    Hello World
  </body>
</html>
CSS3
Cascading Style Sheets (CSS)

- a simple mechanism for adding style (e.g., fonts, colors, spacing) to Web documents.

```html
<style>
  body {background-color:yellow;}
  h1 {color:green}
  p {color:red;}
  div {color:blue; font-size:18px;}
</style>
```
CSS3

• CSS3 is the latest standard for CSS.
• CSS3 is completely backwards-compatible with earlier versions of CSS.

Source: http://www.w3schools.com/css/css3_intro.asp
CSS

Selector: h1

Declaration:
{color: blue; font-size: 12px;}

Property: color
Value: blue

Property: font-size
Value: 12px

http://www.w3schools.com/css/css_syntax.asp
<link rel="stylesheet" type="text/css" href="mystyle1.css"/>
<style>
  body {background-color:yellow;}
  h1 {color:green}
  p {color:red;}
  div {color:blue; font-size:18px;}
</style>
JavaScript
JavaScript

• JavaScript is a **Scripting Language**
  – A scripting language is a **lightweight** programming language.
  – JavaScript is **programming code** that can be inserted into **HTML pages**.
  – JavaScript code can be executed by all **modern web browsers**.
  – JavaScript is easy to learn.

```html
<script language="javascript">
function sayHello()
{
   var strNameInput = document.getElementById('txtNameInput').value;
   var strOutput = "Hello, my friend, " + strNameInput;
   document.getElementById('divOutput').innerHTML = strOutput;
}
</script>
```

Source: [http://www.w3schools.com/js/js_intro.asp](http://www.w3schools.com/js/js_intro.asp)
JavaScript: Writing Into HTML Output

document.write("<h1>This is a heading</h1>);
document.write("<p>This is a paragraph</p>");
JavaScript: Reacting to Events

<button type="button" onclick="alert('Welcome!')">Click Me!</button>
JavaScript: Changing HTML Content

```javascript
x=document.getElementById("demo");
x.innerHTML="Hello JavaScript";
```
HTML5 Editors
Maqetta: Online HTML5 WYSIWYG Editor

Visual authoring of HTML5 user interfaces - in the browser!

Maqetta is an open source project that provides WYSIWYG visual authoring of HTML5 user interfaces. The Maqetta application itself is authored in HTML, and therefore runs in the browser without requiring additional plugins or downloads.

http://maqetta.org/
Aloha Editor - HTML5 WYSIWYG Editor

The world’s most advanced browser HTML5 based WYSIWYG editor lets you experience a whole new way of editing. It’s faster than existing technologies and offers unprecedented WYSIWYG functionalities.

Aloha Editor is available for:

- CONTENT.NODE
- WORDPRESS
- Drupal™
- TYPO3
- ektron
- Create
- Meteor JS
- IOT

http://www.aloha-editor.org/
Adobe Dreamweaver

BlueGriffon: WYSIWYG content editor

BlueGriffon™
The next-generation Web Editor based on the rendering engine of Firefox

BlueGriffon 1.7.2 released 19-Jun-2013

BlueGriffon is a new WYSIWYG content editor for the World Wide Web. Powered by Gecko, the rendering engine of Firefox, it’s a modern and robust solution to edit Web pages in conformance to the latest Web Standards.

It’s free to download (current stable version is 1.7.2) and is available on Windows, Mac OS X and Linux.

BlueGriffon is available in English, Dutch, Finnish, French, Czech, German, Hebrew, Hungarian, Italian, Japanese, Korean, Polish, Simplified Chinese, Serbian, Slovenian, Spanish, Swedish and Traditional Chinese

BlueGriffon is an intuitive application that provides Web authors (beginners or more advanced) with a simple User Interface allowing to create attractive Web sites without requiring extensive technical knowledge about Web Standards.

http://www.bluegriffon.org/
Download Aptana Studio 3.6.1

Aptana Studio 3.6.1 is our code base and complete environment that includes extensive capabilities to build Ruby and Rails, PHP, and Python applications, along with complete HTML, CSS and JavaScript editing.

You are about to download:
Aptana Studio 3.6.1
Mac OS X, Intel

System Requirements
- Mac OS X 10.5 or better, Java 1.6

Getting Started Guide
Release Notes

</body>
</html>
```
Sublime Text

Sublime Text is a sophisticated text editor for code, markup and prose. You'll love the slick user interface, extraordinary features and amazing performance.

http://www.sublimetext.com/
Notepad++ is a free (as in "free speech" and also as in "free beer") source code editor and Notepad replacement that supports several languages. Running in the MS Windows environment, its use is governed by GPL License.

Based on the powerful editing component Scintilla, Notepad++ is written in C++ and uses pure Win32 API and STL which ensures a higher execution speed and smaller program size. By optimizing as many routines as possible without losing user friendliness, Notepad++ is trying to reduce the world carbon dioxide emissions. When using less CPU power, the PC can throttle down and reduce power consumption, resulting in a greener environment.

#include <GPL.h>
#include <free_software.h>

void notepad4ever()
{
    while (true)
    {
        Notepad++;
    }
}
codiqa: drag-and-drop builder for mobile apps

Build jQuery Mobile apps, the easy way.

Codiqa is a powerful drag-and-drop builder for creating cross-platform HTML5 mobile apps and websites. It’s simple, easy to use, and so damn useful.

Get started now! Or try the demo

https://codiqa.com/
Welcome to Codiqa!

Try dragging some elements from the left over here.

You can also add pages, and link buttons to them, like below!

This is just a simple demo, upgrade to the full version to get a lot more!

HTML5 Mobile Apps Simulators
Ripple Emulator (Beta)

A browser based HTML5 mobile application development and testing tool

Welcome to Ripple: The Mobile Environment Emulator!

Ripple is a multi-platform mobile environment emulator that is custom-tailored to mobile HTML5 application development and testing. Ripple aims to reduce the challenges being faced by mobile developers caused by today's platform fragmentation in the marketplace.

Ripple is targeted towards WeWorks, PhoneGap, and mobile web development and testing.

Ripple offers the ability to look under the hood of your mobile application, giving you full visibility into what it is doing. It also allows for the use of existing tools to perform JavaScript debugging, HTML DOM inspection, automated testing, as well as multiple device and screen resolution testing.
