2016-12-21

Course Schedule (1/3)

Week	Date	Subject/Topics
1	2016/09/14	Course Orientation and Introduction to Social Media and Mobile Apps Programming
2	2016/09/21	Introduction to Android / iOS Apps Programming
3	2016/09/28	Developing Android Native Apps with Java (Eclipse) (MIT App Inventor)
4	2016/10/05	Developing iPhone / iPad Native Apps with Swift (XCode)
5	2016/10/12	Mobile Apps using HTML5/CSS3/JavaScript
6	2016/10/19	jQuery Mobile

Course Schedule (2/3)

Week	Date	Subject/Topics
7	2016/10/26	Create Hybrid Apps with PhoneGap
8	2016/11/02	jQuery Mobile/PhoneGap
9	2016/11/09	jQuery Mobile/PhoneGap
10	2016/11/16	Midterm Exam Week (Midterm Project Report)
11	2016/11/23	Case Study on Social Media Apps Programming and Marketing in Google Play and App Store
12	2016/11/30	Invited Talk [B302b]: Challenges in Natural Language Processing: Question Answering and Dialog System Invited Speaker: Prof. Yoshinobu Kano, Associate Professor, Faculty of Informatics, Shizuoka University, Japan

Course Schedule (3/3)

Week	Date	Subject/Topics
13	2016/12/07	Google Cloud Platform
14	2016/12/14	Google App Engine and Google Map API
15	2016/12/21	Facebook API (Facebook JavaScript SDK) (Integrate Facebook with iOS/Android Apps)
16	2016/12/28	Twitter API
17	2017/01/04	Final Project Presentation
18	2017/01/11	Final Exam Week (Final Project Presentation)

Outline

- **Facebook API**
 - Facebook JavaScript SDK
 - Integrate Facebook with iOS/Android Apps
 - Facebook Login
 - Facebook Open Graph API
 - Facebook Graph API

iOS

Integrate Facebook with your native iOS apps.

Android

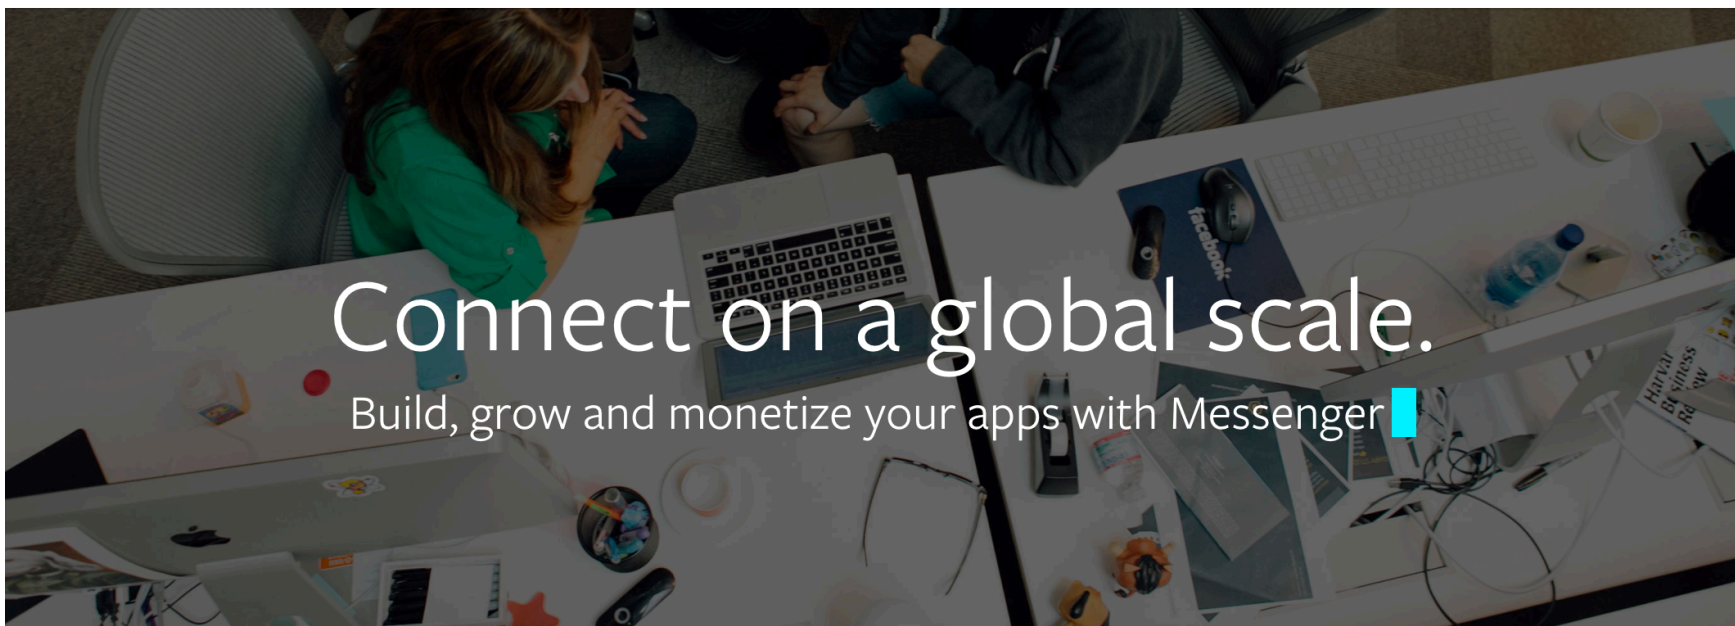

Integrate Facebook with your native Android apps.

Web

Integrate Facebook with your website or host your apps in Facebook.com.

Facebook Developers

Facebook Login

Account Creation in two taps

Sharing on Facebook

Promote your app or website organically

Facebook Analytics for Apps

Understand how people use your app

Mobile Monetization

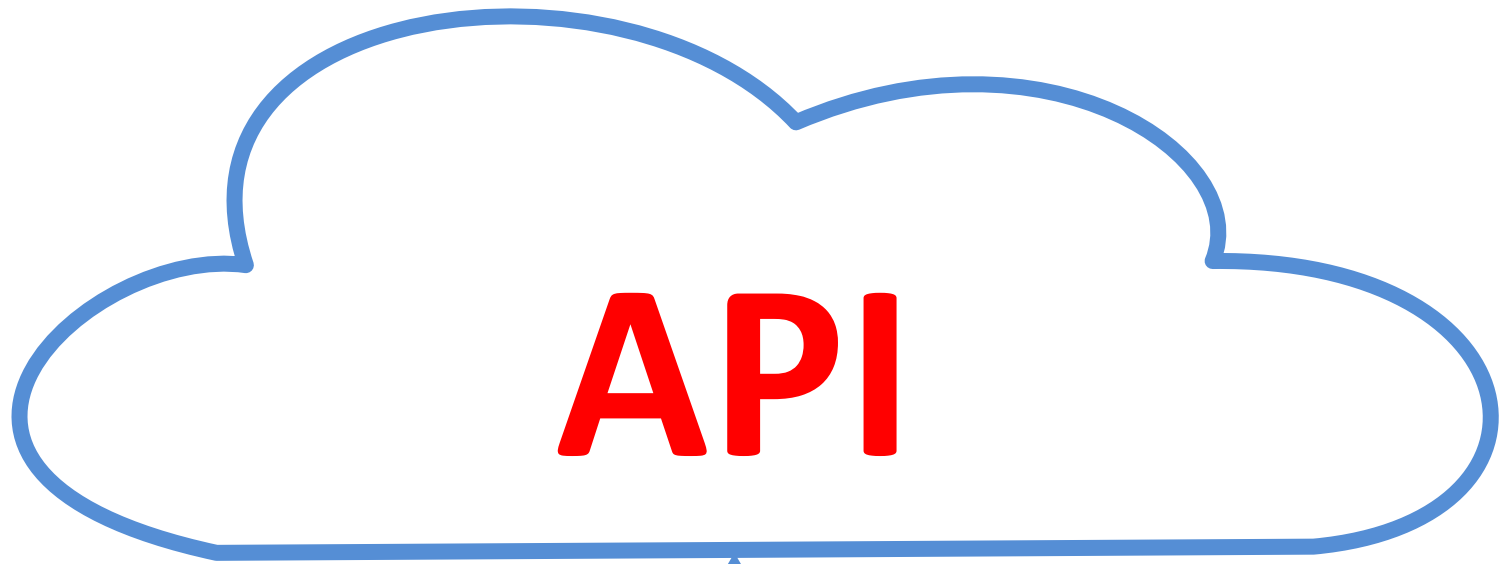

Monetize your mobile app or mobile website with ads

Messenger Platform

Build your bot to reach 1 billion people

<https://developers.facebook.com/>

Your App

API

Request

  "locale": "en_US",  
  "name": "Mark Zuckerberg",  
  "username": "zuck"  
}
```

Your App

http://graph.facebook.com/4

```
{  
  "id": "4",  
  "name": "Mark Zuckerberg",  
  "first_name": "Mark",  
  "last_name": "Zuckerberg",  
  "link": "http://www.facebook.com/zuck",  
  "username": "zuck",  
  "gender": "male",  
  "locale": "en_US"  
}
```

Facebook API (JSON)

<http://graph.facebook.com/4>

```
{  
  "id": "4",  
  "first_name": "Mark",  
  "gender": "male",  
  "last_name": "Zuckerberg",  
  "link": "https://www.facebook.com/zuck",  
  "locale": "en_US",  
  "name": "Mark Zuckerberg",  
  "username": "zuck"  
}
```

<http://graph.facebook.com/minyuhday>

```
{  
  "id": "684393172",  
  "name": "Min-Yuh Day",  
  "first_name": "Min-Yuh",  
  "last_name": "Day",  
  "link": "http://www.facebook.com/minyuhday",  
  "username": "minyuhday",  
  "gender": "male",  
  "locale": "en_US"  
}
```

JSON

- JSON
 - JavaScript Object Notation.
- JSON is a syntax for storing and exchanging data.
- JSON is an easier-to-use alternative to XML.

JSON

```
{"employees":  
  {"firstName":"John", "lastName":"Doe"},  
  {"firstName":"Anna", "lastName":"Smith"},  
  {"firstName":"Peter", "lastName":"Jones"}  
}]
```

XML

```
<employees>  
  <employee>  
    <firstName>John</firstName> <lastName>Doe</lastName>  
  </employee>  
  <employee>  
    <firstName>Anna</firstName> <lastName>Smith</lastName>  
  </employee>  
  <employee>  
    <firstName>Peter</firstName> <lastName>Jones</lastName>  
  </employee>  
</employees>
```

JSON vs. XML

```
{"employees":  
  {"firstName":"John", "lastName":"Doe"},  
  {"firstName":"Anna", "lastName":"Smith"},  
  {"firstName":"Peter", "lastName":"Jones"}  
]}
```

```
<employees>  
  <employee>  
    <firstName>John</firstName> <lastName>Doe</lastName>  
  </employee>  
  <employee>  
    <firstName>Anna</firstName> <lastName>Smith</lastName>  
  </employee>  
  <employee>  
    <firstName>Peter</firstName> <lastName>Jones</lastName>  
  </employee>  
</employees>
```

API

Application

Programming

Interface

JavaScript vs. JSON

- JSON

- JavaScript Object Notation

- Format for sharing data
 - Derived from JavaScript
 - Language independent
 - An alternative to XML

JSON

- Advantages

- Easy to read
- Easy to write
- Easy to Parse

```
Var info = JSON.parse(data);  
info.name  
info.position  
info.courses[i]
```

- Learner than XML
- Growing support in APIs (i.e., Facebook, Twitter)
- Natural format for JavaScript
- Implementation in many languages

JSON

```
{  
  "name" : "Min-Yuh Day"  
  "position" : "Assistant Professor"  
  "courses" : [  
    "Social Media Apps Programming"  
    "Social Media Marketing"  
    "Data Mining"  
  ]  
}
```

```
var info = JSON.parse(data);  
info.name  
info.position  
info.courses[i]
```

Facebook SDK for iOS

The image shows a browser window displaying the Facebook Developers page for the iOS SDK. The browser's address bar shows the URL <https://developers.facebook.com/docs/ios/>. The page header includes the 'facebook developers' logo, a search bar, and navigation links for Docs, Tools, Support, News, and Apps. A user profile for 'Min-Yuh Day' is visible in the top right. On the left side, there is a vertical navigation menu with categories such as Social Plugins, Login, Open Graph, Facebook APIs, Games, Payments, App Center, Media, Ads for Apps, iOS SDK (highlighted), Android SDK, Web, and Technology Partners. The main content area features the title 'Facebook SDK for iOS' and a sub-headline: 'Integrate with Facebook to help you build engaging social apps and get more installs.' Below this is a prominent green button labeled 'Download the SDK'. Further down, it indicates the current version is 'v3.11' and provides links to the 'Change Log' and 'Upgrade Guide'. Three key links are listed: 'Get Started on iOS' (with a book icon), 'SDK Reference Docs' (with an information icon), and 'Comprehensive Reference Docs'. At the bottom of the main content area, the text 'What is in the iOS SDK?' is visible. On the right side of the page, there is a large image of a smartphone with a blue, semi-transparent overlay that features the Facebook 'f' logo.

Facebook for Web Developers

Drive traffic and engagement for your desktop and mobile web apps.

Getting Started

Integrating your website or web app with Facebook makes it more social. From simple features such as the Like button and other social plugins, to powerful engaging stories with Open Graph and real identity through Facebook Login, the Facebook platform provides the tools you need to get people to your website and keep them coming back.

Facebook for Web Developers

The screenshot shows the Facebook Developers website. The browser address bar displays <https://developers.facebook.com/docs/web/>. The page header includes the 'facebook developers' logo, a search bar, and navigation links for 'Docs', 'Tools', 'Support', 'News', and 'Apps'. A user profile for 'Min-Yuh Day' is visible in the top right. The main content area is titled 'Web' and contains a list of links: 'Overview for Websites', 'Overview for Mobile', 'Getting Started with JavaScript', 'JavaScript Guides and Reference', 'Getting Started with PHP', 'PHP Guides and Reference', and 'Other Languages'. Below this list is a 'Technology Partners' section. The 'Getting Started' section is highlighted with a red box and contains the text: 'Integrating your website or web app with Facebook makes it more social. From simple features such as the Like button and other social plugins, to powerful engaging stories with Open Graph and real identity through Facebook Login, the Facebook platform provides the tools you need to get people to your website and keep them coming back.' Below this is a red-bordered box containing the link 'Facebook for Websites'. Another red-bordered box contains the link 'Facebook for Mobile Web Apps'. The 'SDKs for the web' section is also visible, with sub-sections for 'JavaScript', 'PHP', and 'More SDKs'. The 'JavaScript' section states: 'The Facebook SDK for JavaScript provides a rich set of client-side functionality, including Facebook Login, API access and social plugins.' The 'PHP' section states: 'The Facebook SDK for PHP provides a rich set of server-side functionality for accessing Facebook's server-side API calls.' The 'More SDKs' section states: 'Find the SDK to suit the platform you build on, with the full range of SDKs provided by both Facebook and the community.'

Facebook for Web Developers

The screenshot shows the Facebook Developers website. The browser address bar displays <https://developers.facebook.com/docs/web/>. The page header includes the Facebook Developers logo, a search bar, and navigation links for Docs, Tools, Support, News, and Apps. A user profile for Min-Yuh Day is visible in the top right corner.

SDKs for the web

JavaScript

The Facebook SDK for JavaScript provides a rich set of client-side functionality, including Facebook Login, API access and social plugins.

- C#

JavaScript SDK Guides

Using the JavaScript SDK with jQuery

In this tutorial, you'll learn how to incorporate the JavaScript SDK into your jQuery-based web app. Both jQuery and the JavaScript SDK provide their own solutions for deferring code execution until the libraries have loaded, and this tutorial will help you combine the two and ensure both are ready to use before you invoke the SDK.

Using the JavaScript SDK with RequireJS

In this tutorial, you'll learn how to incorporate the JavaScript SDK with other JavaScript modules using RequireJS. Ordinarily, the JavaScript SDK isn't compatible with the Asynchronous Module Definition (AMD) design pattern, so this tutorial covers writing a shim to provide the FB object created by the SDK.

Facebook for Web Developers

The screenshot shows a web browser window with the URL <https://developers.facebook.com/docs/web/gettingstarted/>. The page title is "Getting Started for Websites". The navigation bar includes "facebook developers", a search bar, and links for "Docs", "Tools", "Support", "News", and "Apps". The user profile "Min-Yuh Day" is visible in the top right. The left sidebar lists various categories, with "Web" selected and "Overview for Websites" highlighted with a red box. The main content area features the title "Getting Started for Websites", a breadcrumb "Web > Getting Started for Websites", and an introductory paragraph about the Facebook platform's social features. Below this is a callout box with an information icon and a link to "Getting Started With Facebook For Mobile Web Apps". A section titled "In this guide:" lists seven bullet points: "Adding social features with Plugins", "Sharing content back to Facebook", "Your website as an app on Facebook", "Making your content look good on Facebook", "Getting to know your users", "Telling stories with your content", and "Measuring your success".

Getting Started for Websites

Web > Getting Started for Websites

The Facebook platform enables you to make your website more social. With plugins that let you easily add social features to your website, and dialogs you can use to let your users share your content, you'll be able to start using the features of the Facebook platform in minutes. By using Facebook Login to sign in users with their real identities, calling the Graph API and using Open Graph to tell stories, your users will be more engaged and more likely to return.

This guide walks you through the features available to you, to help you choose the level of integration that's right for you.

Looking for advice on adding Facebook to your mobile web app? Take a look at [Getting Started With Facebook For Mobile Web Apps](#)

The new Facebook Login (April 30, 2015)

The screenshot shows a web browser window with the URL <https://developers.facebook.com/docs/facebook-login/v2.2>. The page is titled "Add Facebook Login to Your App or Website" and is part of the "Product Docs" section. The navigation menu includes "Developers", "Apps", "Products", "Docs", "Tools", "Support", and "Blog". The "Docs" section is expanded to show "Facebook Login Version" with a dropdown menu set to "v2.2".

The main content area features a large heading "Add Facebook Login to Your App or Website" and a sub-heading "Facebook Login is a secure and easy way for people to log in to your app or website." To the right of this text is a graphic of a blue keychain with a white Facebook logo and the text "Log In".

Below the main text are three links for different platforms:

- Login for iOS**: Add Login to your iOS app.
- Login for Android**: Add Login to your Android app.
- Login for the Web**: Add Login in your website or web app.

On the left side, there is a sidebar menu with the following categories: Login, Overview, iOS, Android, Web, Windows Phone, Permissions, Access Tokens, Testing, Best Practices, Advanced, Sharing, App Links, Games, Payments, Ads, and Audience Network.

At the bottom of the page, there is a video player titled "The New Facebook Login and Login Review" with a thumbnail showing a man's face and the text "April 30, 2015".

Facebook Login for JavaScript

The screenshot shows a web browser window with the URL <https://developers.facebook.com/docs/facebook-login/login-flow-for-web/>. The page is titled "Login for JavaScript" and is part of the Facebook Developers documentation. The left sidebar contains a navigation menu with categories like "Social Plugins", "Login", "Open Graph", "Facebook APIs", "Games", "Payments", "App Center", "Media", "Ads for Apps", and "iOS SDK". The "Login" category is expanded, showing sub-items: "Overview", "Login with iOS SDK", "Login with Android SDK", "Login with JavaScript SDK" (which is highlighted), "Login for Games on Facebook", "Permissions", and "Best Practices". The main content area features the article title "Login for JavaScript", an introductory paragraph, a list of sub-topics, and a "Quickstart" section.

facebook developers Search Facebook Developers Docs Tools Support News Apps Min-Yuh Day

Login for JavaScript

Facebook apps can use one of several login flows, depending on the target device and the project. This guide takes you through the login flow for web apps — apps that are accessed through a browser.

The easiest and quickest way to implement Facebook Login for web is with the Facebook SDK for JavaScript. This guide will take you through each step of the web login flow and show you how to implement each of them.

You might also need to implement browser-based login without using our SDKs or a login flow using only server-side code, if so we have a [separate guide to follow](#).

- [Quickstart](#)
- [Checking login status](#)
- [Logging people in](#)
- [Confirming identity](#)
- [Storing access tokens and login status](#)
- [Logging people out](#)

Quickstart

Later in this doc we will guide you through the login flow step-by-step and explain each step clearly – this will help you if you are trying to integrate Facebook Login into an existing login system, or just to integrate it with any server-side code you're running. Before we do that, here we'll really quickly show you the absolute basic block of code that you could use to start building an app using Facebook Login with the JavaScript SDK.

You will need a Facebook App ID before you start using the SDK, which you can create and retrieve on the App Dashboard.

Facebook Login for JavaScript

The image shows a browser window displaying the Facebook Developers documentation page for Facebook Login for JavaScript. The page title is "Login for JavaScript - Facebook Developers". The URL in the address bar is <https://developers.facebook.com/docs/facebook-login/login-flow-for-web/>. The page features a navigation bar with "facebook developers" and a search bar. The main content area is divided into a left sidebar and a main content area. The sidebar contains a table of contents with sections like "Technology Partners", "Overview", "Getting Started", "The Login Flow", "Features", and "Best Practices". The main content area displays a code snippet for initializing Facebook Login for JavaScript. The code includes HTML tags for the root element and a script block that initializes the Facebook SDK with an app ID, status, cookie, and xfbml options. It also shows event subscription logic for handling authentication responses, including comments explaining the behavior of the SDK.

```
<html>
<head></head>
<body>
<div id="fb-root"></div>
<script>
  window.fbAsyncInit = function() {
    FB.init({
      appId      : '{your-app-id}',
      status     : true, // check login status
      cookie     : true, // enable cookies to allow the server to access the session
      xfbml      : true // parse XFBML
    });

    // Here we subscribe to the auth.authResponseChange JavaScript event. This event is fired
    // for any authentication related change, such as login, logout or session refresh. This means
    // whenever someone who was previously logged out tries to log in again, the correct case below
    // will be handled.
    FB.Event.subscribe('auth.authResponseChange', function(response) {
      // Here we specify what we do with the response anytime this event occurs.
      if (response.status === 'connected') {
        // The response object is returned with a status field that lets the app know the current
        // login status of the person. In this case, we're handling the situation where they
        // have logged in to the app.
        testAPI();
      } else if (response.status === 'not_authorized') {
        // In this case, the person is logged into Facebook, but not into the app, so we call
        // FB.login() to prompt them to do so.
        // In real-life usage, you wouldn't want to immediately prompt someone to login
        // like this, for two reasons:
        // (1) JavaScript created popup windows are blocked by most browsers unless they
```

<https://developers.facebook.com/docs/facebook-login/login-flow-for-web/>

Facebook Login for JavaScript

1/3

```
<html>
<head></head>
<body>
<div id="fb-root"></div>
<script>
window.fbAsyncInit = function() {
  FB.init({
    appId      : '{your-app-id}',
    status     : true, // check login status
    cookie     : true, // enable cookies to allow the server to access the session
    xfbml     : true  // parse XFBML
  });
};
```

Facebook Login for JavaScript

2/3

```
// Here we subscribe to the auth.authResponseChange JavaScript event. This event is fired
// for any authentication related change, such as login, logout or session refresh. This means
// whenever someone who was previously logged out tries to log in again, the correct case below
// will be handled.
FB.Event.subscribe('auth.authResponseChange', function(response) {
  // Here we specify what we do with the response anytime this event occurs.
  if (response.status === 'connected') {
    // The response object is returned with a status field that lets the app know the current
    // login status of the person. In this case, we're handling the situation where they
    // have logged in to the app.
    testAPI();
  } else if (response.status === 'not_authorized') {
    // In this case, the person is logged into Facebook, but not into the app, so we call
    // FB.login() to prompt them to do so.
    // In real-life usage, you wouldn't want to immediately prompt someone to login
    // like this, for two reasons:
    // (1) JavaScript created popup windows are blocked by most browsers unless they
    // result from direct interaction from people using the app (such as a mouse click)
    // (2) it is a bad experience to be continually prompted to login upon page load.
    FB.login();
  } else {
    // In this case, the person is not logged into Facebook, so we call the login()
    // function to prompt them to do so. Note that at this stage there is no indication
    // of whether they are logged into the app. If they aren't then they'll see the Login
    // dialog right after they log in to Facebook.
    // The same caveats as above apply to the FB.login() call here.
    FB.login();
  }
});
};
```

<https://developers.facebook.com/docs/facebook-login/login-flow-for-web/>

Facebook Login for JavaScript

3/3

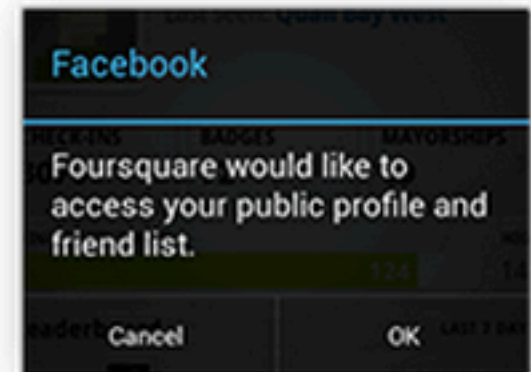

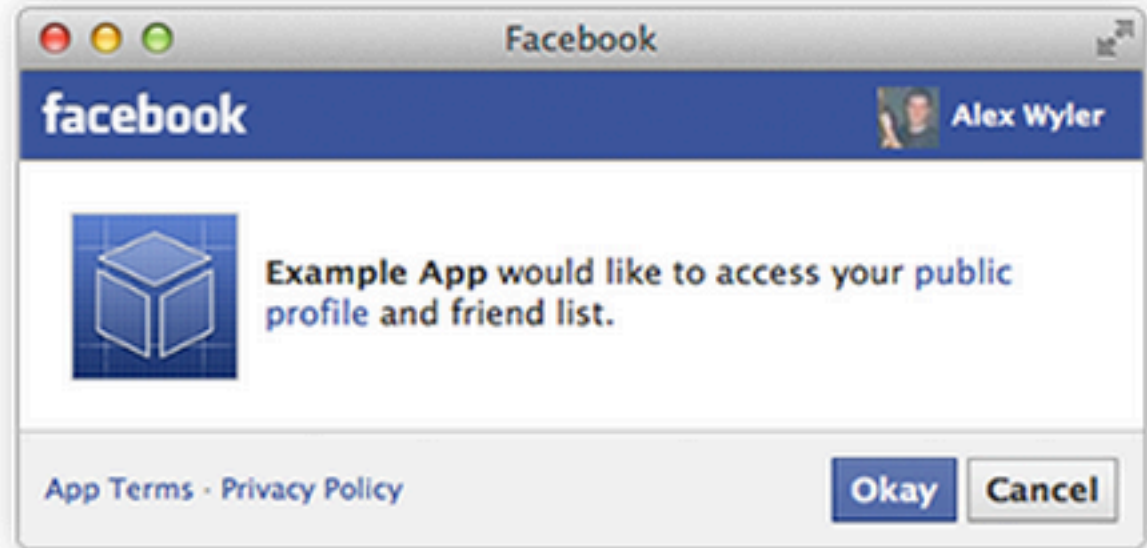

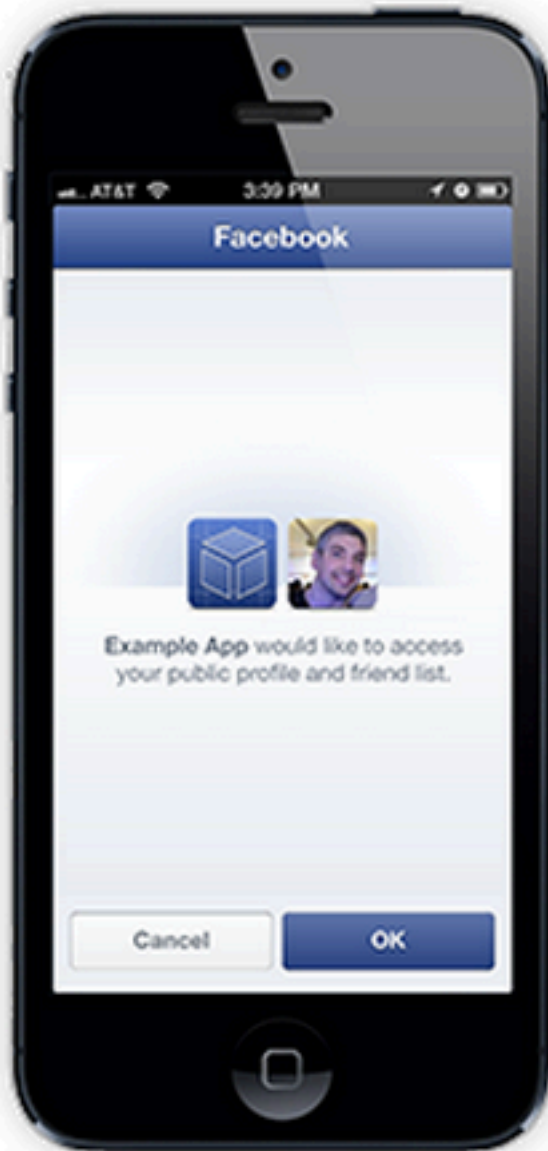

```
// Load the SDK asynchronously
(function(d){
  var js, id = 'facebook-jssdk', ref = d.getElementsByTagName('script')[0];
  if (d.getElementById(id)) {return;}
  js = d.createElement('script'); js.id = id; js.async = true;
  js.src = "//connect.facebook.net/en_US/all.js";
  ref.parentNode.insertBefore(js, ref);
})(document);

// Here we run a very simple test of the Graph API after login is successful.
// This testAPI() function is only called in those cases.
function testAPI() {
  console.log('Welcome! Fetching your information.... ');
  FB.api('/me', function(response) {
    console.log('Good to see you, ' + response.name + '.');
  });
}
</script>

<!--
  Below we include the Login Button social plugin. This button uses the JavaScript SDK to
  present a graphical Login button that triggers the FB.login() function when clicked. -->

<fb:login-button show-faces="true" width="200" max-rows="1"></fb:login-button>
</body>
</html>

Create an app to start integrating with Facebook or jump into the docs.

Websites
Using Facebook on your Website allows you to create a more personalized, social experience using Social Plugins such as the Like Button and simplifies your registration and sign-in process using Login Button and Registration Plugin.

Apps on Facebook
Building an app on Facebook gives you the opportunity to deeply integrate into our core user experience. Use native Facebook functionality such as Requests and Bookmarks to create an ideal social space for your users.

Mobile Apps
Facebook Platform makes iOS (iPhone & iPad), Android and Mobile Web apps social. Use Single Sign-On to access the user's social graph (without yet another username/password) and create a personalized experience.

Facebook Apps: Create New App

The image shows a browser window with the URL <https://developers.facebook.com/apps>. The page title is "facebook developers" and the user is logged in as "Min-Yuh Day". A modal dialog box titled "Create New App" is open, containing the following fields:

- App Name:** [?] iMyday
- App Namespace:** [?] Optional
- App Category:** [?] Other (with a sub-category dropdown set to "Choose a sub-category")

At the bottom of the dialog, there is a checkbox labeled "By proceeding, you agree to the Facebook Platform Policies" and two buttons: "Continue" and "Cancel".

The background page shows a "Welcome to the App Dashboard" message and a "Create an app to start" button. There are also sections for "Apps on Facebook" and "Mobile Apps" with descriptive text.

Facebook Apps: Create New App

The image shows a browser window at <https://developers.facebook.com/apps>. The page title is "facebook developers" and the user is logged in as "Min-Yuh Day". The main heading is "Apps" with a "+ Create New App" button. A modal window titled "Create New App" is open, showing the following fields:

- App Name:** [?] Valid
- App Namespace:** [?]
- App Category:** [?] Choose a sub-category

The "App Category" dropdown menu is open, displaying a list of categories:

- Choose a category
- Apps for Pages
- Books
- Business
- Communication
- Education** (selected)
- Entertainment
- Fashion
- Finance
- Food & Drink
- Games
- Health & Fitness
- Lifestyle
- Local
- Music
- Navigation
- News
- Other
- Photo
- Productivity
- Promotions and Contests
- Reference
- Shopping
- Sports
- Travel
- Utilities
- Video

At the bottom of the modal, there are "Continue" and "Cancel" buttons. The background of the page is slightly dimmed, showing a "Welcome to the App Dashboard" message and some introductory text about building apps on Facebook.

Test Facebook Login on jsbin.com

The screenshot shows a web browser window with the URL `jsbin.com/OYAxevU/1/edit` highlighted in red. The browser's address bar also shows a star icon and a menu icon. Below the address bar, there are tabs for 'HTML', 'CSS', 'JavaScript', 'Console', and 'Output'. The 'Output' tab is selected, showing a rendered Facebook login button with the text 'Log in' and 'Be the first of your friends to use iMyday.' The button is highlighted with a red box. The main editor area contains JavaScript code for testing Facebook login. The code includes a function `FB.init()` with the following properties: `appId` (highlighted in red), `status`, `cookie`, and `xfbml`. The code also includes comments and event subscriptions for handling login status changes.

```
<html>
<head></head>
<body>
<div id="fb-root"></div>
<script>
window.fbAsyncInit = function() {
  FB.init({
    appId      : '1378880249017680'
    status    : true, // check login status
    cookie    : true, // enable cookies to allow the server to access the session
    xfbml     : true  // parse XFBML
  });

  // Here we subscribe to the auth.authResponseChange JavaScript event. This event is
  // fired
  // for any authentication related change, such as login, logout or session refresh.
  // This means that
  // whenever someone who was previously logged out tries to log in again, the correct
  // case below
  // will be handled.
  FB.Event.subscribe('auth.authResponseChange', function(response) {
    // Here we specify what we do with the response anytime this event occurs.
    if (response.status === 'connected') {
      // The response object is returned with a status field that lets the app know the
      // current
      // login status of the person. In this case, we're handling the situation where
      // they
      // have logged in to the app.
      testAPI();
    } else if (response.status === 'not_authorized') {
      // In this case, the person is logged into Facebook, but not into the app, so we
      // call
      // FB.login() to prompt them to do so.
      // In real-life usage, you wouldn't want to immediately prompt someone to login
      // like this, for two reasons:
      // (1) JavaScript created popup windows are blocked by most browsers unless they
      // result from direct interaction from people using the app (such as a mouse
      // click)
      // (2) it is a bad experience to be continually prompted to login upon page load.
      FB.login();
    } else {
      // In this case, the person is not logged into Facebook, so we call the login()
      // function to prompt them to do so. Note that at this stage there is no
```

Facebook SDK for JavaScript

Getting Started - Facebook x

https://developers.facebook.com/docs/javascript/gettingstarted/

facebook developers Search Facebook Developers Docs Tools Support News Apps Min-Yuh Day

Getting Started with the Facebook SDK for JavaScript

The Facebook SDK for JavaScript provides a rich set of client-side functionality that:

- Enables you to use the Like Button and other Social Plugins on your site.
- Enables you to use Facebook Login to lower the barrier for people to sign up on your site.
- Makes it easy to call into Facebook's primary API, called the Graph API.
- Launch Dialogs that let people perform various actions like sharing stories.
- Facilitates communication when you're building a game or an app tab on Facebook.

The SDK, social plugins and dialogs work on both desktop and mobile web browsers.

Loading and Initialization

The following code will load and initialize the JavaScript SDK with the most common options. Replace `YOUR_APP_ID` and `WWW.YOUR_DOMAIN.COM` with the appropriate values from the App Dashboard.

This code should be placed directly after the opening `<body>` tag.

```
<div id="fb-root"></div>
<script>
window.fbAsyncInit = function() {
  // init the FB JS SDK
  FB.init({
    appId      : 'YOUR_APP_ID',
    // App ID from the app dashboard
```

Facebook SDK for JavaScript

```
<div id="fb-root"></div>
<script>
  window.fbAsyncInit = function() {
    // init the FB JS SDK
    FB.init({
      appId      : 'YOUR_APP_ID',           // App ID from the app dashboard
      status     : true,                   // Check Facebook Login status
      xfbml      : true                    // Look for social plugins on the page
    });

    // Additional initialization code such as adding Event Listeners goes here
  };

  // Load the SDK asynchronously
  (function(d, s, id){
    var js, fjs = d.getElementsByTagName(s)[0];
    if (d.getElementById(id)) {return;}
    js = d.createElement(s); js.id = id;
    js.src = "//connect.facebook.net/en_US/all.js";
    fjs.parentNode.insertBefore(js, fjs);
  }(document, 'script', 'facebook-jssdk'));
</script>
```

Facebook SDK for JavaScript

The screenshot shows the Facebook Developers website. The browser address bar displays `https://developers.facebook.com/docs/reference/javascript/`. The page header includes the "facebook developers" logo, a search bar, and navigation links for "Docs", "Tools", "Support", "News", and "Apps". A user profile for "Min-Yuh Day" is visible in the top right. The left sidebar contains a navigation menu with categories like "Social Plugins", "Login", "Open Graph", "Facebook APIs", "Games", "Payments", "App Center", "Media", "Ads for Apps", "iOS SDK", and "Android SDK". The "Web" category is expanded, showing links for "Overview for Websites", "Overview for Mobile", "Getting Started with JavaScript", and "JavaScript Guides and Reference". The main content area features the heading "JavaScript" with a sub-heading "Web > JavaScript". Below this is the main heading "Facebook SDK for JavaScript" and a paragraph describing the SDK's functionality. A blue information box contains a tip to consult the "Getting Started" guide. The text explains that the following code will load and initialize the JavaScript SDK with common options, and that this code should be placed directly after the opening `<body>` tag. A code block provides the initialization code with comments for each parameter.

JavaScript
Web > JavaScript

Facebook SDK for JavaScript

The Facebook SDK for JavaScript provides a rich set of client-side functionality for adding Social Plugins, making API calls and implementing Facebook Login.

Take a look at the [Getting Started](#) guide for full information about features and usage.

The following code will load and initialize the JavaScript SDK with the most common options. Replace `YOUR_APP_ID` with your App ID from the [App Dashboard](#).

This code works best when placed directly after the opening `<body>` tag.

```
<div id="fb-root"></div>
<script>
  window.fbAsyncInit = function() {
    // init the FB JS SDK
    FB.init({
      appId      : 'YOUR_APP_ID',           // App ID from the app dashboard
      status     : true,                   // Check Facebook Login status
      xfbml     : true                     // Look for social plugins on the page
    });
  };
  (function(d, s, id) {
    var js, fjs = d.getElementsByTagName(s)[0];
    if (d.getElementById(id)) return;
    js = d.createElement(s); js.id = id;
    js.src = "//connect.facebook.net/en_US/sdk.js";
    fjs.parentNode.insertBefore(js, fjs);
  }(document, 'script', 'facebook-jssdk'));
```

Facebook SDK for JavaScript

```
<div id="fb-root"></div>
<script>
  window.fbAsyncInit = function() {
    // init the FB JS SDK
    FB.init({
      appId      : 'YOUR_APP_ID',          // App ID from the app dashboard
      status     : true,                   // Check Facebook Login status
      xfbml      : true                     // Look for social plugins on the page
    });

    // Additional initialization code such as adding Event Listeners goes here
  };

  // Load the SDK asynchronously
  (function(){
    // If we've already installed the SDK, we're done
    if (document.getElementById('facebook-jssdk')) {return;}

    // Get the first script element, which we'll use to find the parent node
    var firstScriptElement = document.getElementsByTagName('script')[0];

    // Create a new script element and set its id
    var facebookJS = document.createElement('script');
    facebookJS.id = 'facebook-jssdk';

    // Set the new script's source to the source of the Facebook JS SDK
    facebookJS.src = '//connect.facebook.net/en_US/all.js';

    // Insert the Facebook JS SDK into the DOM
    firstScriptElement.parentNode.insertBefore(facebookJS, firstScriptElement);
  }());
</script>
```

Setup the Facebook SDK for JavaScript

The following snippet of code will give the basic version of the SDK where the options are set to their most common defaults. You should insert it directly after the opening `<body>` tag on each page you want to load it:

```
<script>
window.fbAsyncInit = function() {
  FB.init({
    appId      : '231707243775731',
    xfbml      : true,
    version    : 'v2.2'
  });
};
```

Give Feedback

```
<script>
  window.fbAsyncInit = function() {
    FB.init({
      appId      : '231707243775731',
      xfbml      : true,
      version    : 'v2.2'
    });
  };

  (function(d, s, id){
    var js, fjs = d.getElementsByTagName(s)[0];
    if (d.getElementById(id)) {return;}
    js = d.createElement(s); js.id = id;
    js.src = "//connect.facebook.net/en_US/sdk.js";
    fjs.parentNode.insertBefore(js, fjs);
  })(document, 'script', 'facebook-jssdk');
</script>
```

Like Button

The Like button is the quickest way for people to share content with their friends.

A single click on the Like button will 'like' pieces of content on the web and share them on Facebook. You can also display a Share button next to the Like button to let people add a personal message and customize who they share with.

i We are rolling out a new design for the Like button. This will involve changes to the design which should not affect the button dimensions, and the **share** setting replacing the **send** setting (the **send** setting will remain for backwards compatibility only). You do not need to do anything to prepare for this change, as your button will automatically be upgraded when ready.

Facebook Share Button

The screenshot shows the Facebook Developers website. The browser address bar displays <https://developers.facebook.com/docs/plugins/share-button/>. The page title is "Share Button".

Share Button

The Share button lets people add a personalized message to links before sharing on their timeline, in groups, or to their friends via a Facebook Message. If your app is native to iOS or Android, we recommend that you use the native [Share Dialog](#) on iOS and [Share Dialog on Android](#) instead.

Info: This new Share Button works with a new version of our web-based Share Dialog. When using the `sharer.php` method of invoking the Share Dialog, this dialog will also display the new version without any changes required.

Open Graph

Help people tell rich stories on Facebook from your app through a structured, strongly typed API.

Overview
How Open Graph works.

Get Started Tutorial
Example on how to use Open Graph.

What are Open Graph Stories

Once a person grants your app permissions to post to their Facebook Timeline via Facebook Login, your app can start publishing open graph stories on their behalf.

A typical story consists of four elements: an actor, action, object and your app's name. With these elements you can

Telling Stories with Open Graph

Open Graph lets apps tell stories on Facebook through a structured, strongly typed API.

People use stories to share the things they're doing, the people they're doing them with and the places where they happen. Open Graph lets you integrate apps deeply into the Facebook experience, which increases engagement, distribution and growth.

Here's an example story from Goodreads:

Christopher Blizzard rated *Neuromancer (Sprawl, #1)* on Goodreads.

Getting Started

Documentation > Open Graph > Getting Started

Getting Started with Open Graph

This document guides you through the key steps to publish your first story with Open Graph. You'll build a sample app that likes an object and publishes a story to Facebook.

- Prerequisites
- Step 1: Create a Facebook App
- Step 2: Set Up the App
- Step 3: Publish a Story
- Step 4: Submit Your Actions for Review

Once you're done with this guide, you can also learn about possible next steps.

Prerequisites

In order to finish this walk-through, you'll need access to a public web server on which you can create one static web page.

Step 1: Create a Facebook App

To create a Facebook app, click on [Apps](#) on the top of this page and select 'Create a New App'.

This will create a popup box will prompt you to enter two things:

Step 1: Create a Facebook App

Basic	Advanced	Migrations
App ID 256778997811632	App Secret Show	
Display Name Open Graph Getting Started	Namespace	
App Domains example.com x	Contact Email example@example.com	

Website

Site URL
http://example.com/full-path-to-the-app-file.html

Mobile Site URL
URL of your mobile site

NO Accept Mobile Web Payments
If your app accepts payments through any non-iOS approved service, it will be restricted on iOS. [Learn More](#)

Step 2: Set Up the App

1/3

```
<html>
<head>
<title>Open Graph Getting Started App - og.likes</title>
<style type="text/css">
div { padding: 10px; }
</style>
<meta charset="UTF-8">
</head>
<body>
<div id="fb-root"></div>
<script type="text/javascript">
  // You probably don't want to use globals, but this is just example code
  var fbAppId = 'replace me';
  var objectToLike = 'http://techcrunch.com/2013/02/06/facebook-launches-developers-live-video-chann

  // This check is just here to make sure you set your app ID. You don't
  // need to use it in production.
  if (fbAppId === 'replace me') {
    alert('Please set the fbAppId in the sample.');
```

Step 2: Set Up the App

2/3

```
// Load the SDK Asynchronously
(function(d, s, id){
  var js, fjs = d.getElementsByTagName(s)[0];
  if (d.getElementById(id)) {return;}
  js = d.createElement(s); js.id = id;
  js.src = "//connect.facebook.net/en_US/all.js";
  fjs.parentNode.insertBefore(js, fjs);
})(document, 'script', 'facebook-jssdk');
```

```
function postLike() {
  FB.api(
    'https://graph.facebook.com/me/og.likes',
    'post',
    { object: objectToLike,
      privacy: {'value': 'SELF'} },
    function(response) {
      if (!response) {
        alert('Error occurred.');
```

```
      } else if (response.error) {
        document.getElementById('result').innerHTML =
          'Error: ' + response.error.message;
      } else {
        document.getElementById('result').innerHTML =
          '<a href=\"https://www.facebook.com/me/activity/' +
            response.id + '\">' +
            'Story created. ID is ' +
            response.id + '</a>';
      }
    }
  );
}
```

```
</script>
```

Step 2: Set Up the App

3/3

```
<div
  class="fb-login-button"
  data-show-faces="true"
  data-width="200"
  data-max-rows="1"
  data-scope="publish_actions">
</div>

<div>

Facebook APIs

Graph API

The Graph API is a simple HTTP-based API that gives access to the Facebook social graph, uniformly representing objects in the graph and the connections between them. Most other APIs at Facebook are based on the Graph API.

Open Graph

The Open Graph API allows apps to tell stories on Facebook through a structured, strongly typed API.

Dialogs

Facebook offers a number of dialogs for Facebook Login, posting to a person's timeline or sending requests.

Chat

You can integrate Facebook Chat into your Web-based, desktop, or mobile instant messaging products. Your instant messaging client connects to Facebook Chat via the Jabber XMPP service.

Ads API

The Ads API allows you to build your own app as a customized alternative to the Facebook Ads Manager and Power Editor tools.

FQL

Facebook Query Language, or FQL, enables you to use a SQL-style interface to query the data exposed by the Graph API. It provides for some advanced features not available in the Graph API such as using the results of one query in another.

Localization and translation

Facebook supports localization of apps. Read about the tools we provide.

Atlas API

The Atlas APIs provides you with programmatic access to the Atlas web services.

Public Feed API

The Public Feed API lets you read the stream of public comments as they are posted to Facebook.

Keyword Insights API

The Keyword Insights API exposes an analysis layer on top of all Facebook posts that enables you to query aggregate, anonymous insights about people mentioning a certain term.

Facebook Graph API

The screenshot shows a web browser window displaying the Facebook Graph API documentation. The browser's address bar shows the URL <https://developers.facebook.com/docs/graph-api/>. The page header includes the Facebook Developers logo, a search bar, and navigation links for Docs, Tools, Support, News, and Apps. A user profile for Min-Yuh Day is visible in the top right. The left sidebar contains a list of navigation items, with 'Graph API' highlighted in a red box. The main content area features the title 'The Graph API' and a subtitle 'The primary way for apps to read and write to the Facebook social graph.' Below this, there are three columns of content: 'Quickstart' (Find out to read and publish data in a few simple steps.), 'Using the Graph API' (Using the Graph API you are able to post new stories, upload photos, retrieve posts and a variety of other tasks that an app might need to do. This guide will teach you how to accomplish all these things in the Graph API.), and 'API Reference' (Get the full details of all the nodes, edges, and fields in the Graph API.). Below these columns is a section for 'Common App Scenarios' (Because the Graph API can be used in a massive variety of ways, we have provided a list of common scenarios for apps in this doc, to help you locate the reference doc that you need to build a solution for it.) and 'Advanced Guides' (After you've conquered the basics of Graph API, you might want to learn more. We have guides to advanced topics like Making Multiple API Requests, Real Time Updates, and Securing API calls in our Advanced Guides section.). To the right of the 'Advanced Guides' section is a section for 'Other APIs' (The Graph API is connected to some other Facebook APIs such as FQL. You can read our guides to these APIs in this section.). At the bottom of the page, there is a feedback form asking 'Was this document helpful? Yes · No'.

Quickstart for Graph API

The screenshot shows a web browser window with the URL <https://developers.facebook.com/docs/graph-api/quickstart/>. The page title is "Quickstart for Graph API". The left sidebar contains a navigation menu with categories: Social Plugins, Login, Open Graph, Facebook APIs (highlighted with a red box), Games, Payments, App Center, Media, Ads for Apps, iOS SDK, and Android SDK. The "Facebook APIs" section lists: Graph API, FQL, Open Graph, Dialogs, Chat, Internationalization, Ads, Public Feed, and Keyword Insights. The main content area has the heading "Quickstart for Graph API" and the following text: "The Graph API is the primary way to get data in and out of Facebook's social graph. It's a low-level HTTP-based API that you can use to query data, post new stories, upload photos and a variety of other tasks that an app might need to do. Because this API is HTTP-based, you can try it out for yourself in your web browser right away. When you open this link you'll see the basic info returned by the Graph API for the Facebook Developers Page. Most Graph API requests will require the use of access tokens which your app can generate by implementing Facebook Login. The APIs are composed of nodes (such as a User, a Photo, a Page, a Comment), edges (such as a Page's Photos, or a Photo's Comments), and fields (such as the birthday of a User, or the name of a Page). This quickstart will show you how the Graph API can read and publish data to the social graph." Below this is the section "How the Graph API is structured" with the text: "We will cover this fully in our Using Graph API guide, but in general you can read APIs by making HTTP GET requests to the node:" followed by a code block:

```
GET graph.facebook.com
/{node-id}
```

 and "or edge:" followed by another code block:

```
GET graph.facebook.com
/{node-id}/{edge-name}
```

<https://developers.facebook.com/docs/graph-api/quickstart/>

Getting Started with the Graph API

The image shows a YouTube video player interface. The video title is "Getting Started with the Graph API". The channel is "Facebook Developers" with 144 videos. The video has 98,929 views, 170 likes, and 7 dislikes. A "Subscribe" button is visible with 9,976 subscribers. The video player shows a progress bar at 0:01 / 17:34. The video content area displays the title "Getting Started with the Graph API" and the "facebook developers live" logo.

How the Graph API is structured

The screenshot shows a web browser window with the URL <https://developers.facebook.com/docs/graph-api/quickstart/>. The page title is "How the Graph API is structured". The left sidebar contains navigation links for Ads, Public Feed, Keyword Insights, Games, Payments, App Center, Media, Ads for Apps, iOS SDK, Android SDK, Web, Technology Partners, Guides, Advanced, Other APIs, Quickstart, and Using the Graph API. The main content area has a search bar and navigation links for Docs, Tools, Support, News, and Apps. The user profile "Min-Yuh Day" is visible in the top right. The main text explains that APIs are accessed via HTTP GET requests to nodes or edges. It provides two examples of GET requests: one for a node and one for an edge. It also explains that APIs are published via HTTP POST requests with parameters to the node or edge. It concludes by stating that deleting is done via HTTP DELETE requests and updating via POST requests to the same endpoints. The final sentence says "Now let's try an API request, so you can see how easy it is."

facebook developers Search Facebook Developers Docs Tools Support News Apps Min-Yuh Day

How the Graph API is structured

We will cover this fully in our [Using Graph API guide](#), but in general you can read APIs by making HTTP GET requests to the node:

```
GET graph.facebook.com
  /{node-id}
```

or edge:

```
GET graph.facebook.com
  /{node-id}/{edge-name}
```

You can generally publish to APIs by making HTTP POST requests with parameters to the node:

```
POST graph.facebook.com
  /{node-id}
```

or edge:

```
POST graph.facebook.com
  /{node-id}/{edge-name}
```

Deleting via APIs is accomplished using HTTP DELETE requests (and updating via POST requests) to the same endpoints.

Now let's try an API request, so you can see how easy it is.

Load the Graph API Explorer

The screenshot shows a web browser window with the URL <https://developers.facebook.com/docs/graph-api/quickstart/>. The page title is "Load the Graph API Explorer". The content includes an introduction to the Graph API Explorer, a link to the Explorer tool, and instructions on how to generate an access token. A button labeled "Get access token" is highlighted. Below the button, there are instructions on how to use the Explorer and how to make a Graph API request. At the bottom of the page, there is a form with a dropdown menu set to "GET" and a text field containing "/me".

facebook developers Search Facebook Developers Docs Tools Support News Apps Min-Yuh Day

Load the Graph API Explorer

The easiest way to understand the Graph API is to use it with the Graph API Explorer, a low-level tool you can use to query, add and remove data. It's a very handy resource to have at your fingertips while you build your app.

So your next step is to goto <https://developers.facebook.com/tools/explorer>.

Generate a basic Access Token

When you get to building your own app, you'll need to learn about [access tokens](#) and how to generate them using Facebook Login, but for now, we can get one really quickly through the Graph API Explorer.

Click on the "Get Access Token" button in the top right of the Explorer:

[⇌ Get access token](#)

In the next dialog that appears, don't check any boxes, just click the blue "Get Access Token" button. Now you'll see the Login Dialog, click "OK" here to proceed.

Make your first Graph API request

Now you're ready to make your first Graph API request, we'll start with a 'read' request. In the text field beside the "GET" dropdown button (we'll call this the path field), delete the existing text and type in 'me':

Graph API FQL Query

GET → /me

Profile Submit

<https://developers.facebook.com/docs/graph-api/quickstart/>

Facebook Graph API Explorer

The screenshot shows the Facebook Graph API Explorer interface. At the top, there's a navigation bar with the Facebook Developers logo, a search bar, and links for Docs, Tools, Support, News, and Apps. The user profile of Min-Yuh Day is visible in the top right. The main content area is titled "Graph API Explorer" and includes settings for the application (Graph API Explorer) and locale (English (US)). Below this, there's a section for "Access Token" with a text input field containing the instruction "Paste in an existing Access Token or click 'Get Access Token' to generate one" and two buttons: "Get Access Token" and "Get App Token". The "Graph API" tab is selected, and the "FQL Query" section shows a "GET" method and a query path: "/684393172?fields=id,name". A "Submit" button is present. Below the query, there's a link to "Learn more about the Graph API syntax." The results section on the left shows the node ID "684393172" and two selected fields: "id" and "name". The JSON response on the right is:

```
{  "name": "Min-Yuh Day",  "id": "684393172"}
```

Facebook Graph API Explorer /me

The screenshot shows the Facebook Graph API Explorer interface. At the top, the browser address bar displays the URL <https://developers.facebook.com/tools/explorer?method=GET&path=me>. The page header includes the Facebook Developers logo, a search bar, and navigation links for Docs, Tools, Support, News, and Apps. The user's name, Min-Yuh Day, is visible in the top right corner.

The main content area is titled "Graph API Explorer" and includes settings for the application (Graph API Explorer) and locale (English (US)). Below these settings, there is a section for the Access Token, with a text input field containing the placeholder "Paste in an existing Access Token or click 'Get Access Token' to generate one". Two buttons are present: "Get Access Token" (highlighted with a red box) and "Get App Token".

Below the Access Token section, there are two tabs: "Graph API" (selected) and "FQL Query". Under the "Graph API" tab, there is a dropdown menu set to "GET" and a text input field containing the path "/me". A "Submit" button (highlighted with a red box) is located to the right of the input field.

Below the input field, there is a link that says "Learn more about the Graph API syntax."

The response area is divided into two columns. The left column shows the node information: "Node: me" and "(No fields expansion available)". The right column displays the JSON response, which is an error message:

```
{
  "error": {
    "message": "An active access token must be used to query information about the current user.",
    "type": "OAuthException",
    "code": 2500
  }
}
```

<https://developers.facebook.com/tools/explorer?method=GET&path=me>

Facebook Graph API Explorer /me

The screenshot shows the Facebook Graph API Explorer interface. The browser address bar displays the URL: <https://developers.facebook.com/tools/explorer?method=GET&path=me>. The page header includes the Facebook Developers logo, a search bar, and navigation links for Docs, Tools, Support, News, and Apps. The user's name, Min-Yuh Day, is visible in the top right corner.

The main content area is titled "Graph API Explorer" and shows the "Application" set to "Graph API Explorer" and the "Locale" set to "English (US)". The "Access Token" field is empty, and the "Method" is set to "GET" with the path "/me".

A "Select Permissions" dialog box is open in the foreground, listing various permissions under three categories: "User Data Permissions", "Friends Data Permissions", and "Extended Permissions". The "User Data Permissions" category is highlighted with a red box. The permissions listed are:

- user_about_me
- user_actions.news
- user_birthday
- user_events
- user_groups
- user_likes
- user_online_presence
- user_questions
- user_religion_politics
- user_videos
- user_actions.books
- user_actions.video
- user_checkins
- user_friends
- user_hometown

- user_activities
- user_education_history
- user_games_activity
- user_interests
- user_notes
- user_photos
- user_relationships
- user_subscriptions
- user_work_history

At the bottom of the dialog box, there is a note: "Basic permissions included by default." and three buttons: "Get Access Token", "Clear", and "Cancel".

<https://developers.facebook.com/tools/explorer?method=GET&path=me>

Facebook Graph API Explorer /me

The screenshot shows the Facebook Graph API Explorer interface. A modal dialog titled "Select Permissions" is open, displaying a list of permissions organized into three columns: "User Data Permissions", "Friends Data Permissions", and "Extended Permissions". The "user_friends" permission in the "Friends Data Permissions" column is selected and highlighted with a red box. At the bottom of the dialog, the "Get Access Token" button is also highlighted with a red box. The background interface shows the URL <https://developers.facebook.com/tools/explorer?method=GET&path=me> in the browser address bar, the "Graph API Explorer" application name, and the "English (US)" locale. The "Submit" button is visible on the right side of the dialog.

Graph API Explorer will receive the following info: your **public profile** and friend list.

Facebook Graph API Explorer /me

The screenshot shows the Facebook Graph API Explorer interface. At the top, the browser address bar displays the URL <https://developers.facebook.com/tools/explorer?method=GET&path=me>. The page header includes the Facebook Developers logo, a search bar, and navigation links for Docs, Tools, Support, News, and Apps. The user profile for Min-Yuh Day is visible in the top right.

The main content area is titled "Graph API Explorer". It features a dropdown menu for the application, currently set to "Graph API Explorer", and a dropdown for the locale, set to "English (US)". Below these, there is an "Access Token" field containing the token `CAACEdEose0cBAJ2Pi0VN9CZAexKrijtNm9CPGer7ZCKmqlexrgRtctFjuYWYv5ne6\`, which is highlighted with a red box. To the right of the token field are buttons for "Debug", "Get Access Token", and "Get App Token".

Below the token field, there are two tabs: "Graph API" (selected) and "FQL Query". Under the "Graph API" tab, there is a dropdown menu for the HTTP method, currently set to "GET", and a text input field containing the path `/me`, which is also highlighted with a red box. To the right of the input field is a "Submit" button, also highlighted with a red box.

Below the input field, there is a link that says "Learn more about the Graph API syntax." The main response area is divided into two columns. The left column shows the node information: "Node: me" and "(No fields expansion available)". The right column displays the JSON response, which is an error object:

```
{
  "error": {
    "message": "An active access token must be used to query information about the current user.",
    "type": "OAuthException",
    "code": 2500
  }
}
```

<https://developers.facebook.com/tools/explorer?method=GET&path=me>

Facebook Graph API Explorer /me

The screenshot shows the Facebook Graph API Explorer interface. At the top, there's a navigation bar with 'facebook developers' and a search bar. Below that, the 'Graph API Explorer' title is visible, along with application, locale, and language settings. The 'Access Token' field is highlighted with a red box and contains the token 'CAACEdEose0cBAJ2Pi0VN9CZAexKrjtNm9CPGer7ZCKmqlexrgRtctFjuYWYv5ne6Y'. The 'Method' dropdown is set to 'GET' and the 'Path' field contains '/me', both highlighted with red boxes. A 'Submit' button is also highlighted. Below the form, the response is displayed in a code block, showing a JSON object with user information for Min-Yuh Day.

Facebook Graph API Explorer /me/friends

The screenshot shows the Facebook Graph API Explorer interface. At the top, there's a navigation bar with the Facebook logo, a search bar, and links for Docs, Tools, Support, News, and Apps. The user profile 'Min-Yuh Day' is visible in the top right. The main area is titled 'Graph API Explorer' and includes settings for Application (Graph API Explorer) and Locale (English (US)).

The 'Access Token' field contains a long alphanumeric string. Below it, there are buttons for 'Debug', 'Get Access Token', and 'Get App Token'. The 'Graph API' tab is selected, and the 'FQL Query' field contains '/me/friends'. A 'Submit' button is located to the right of the query field.

Below the query field, there's a link to 'Learn more about the Graph API syntax.' The main content area is split into two panels. The left panel shows the edge 'me/friends' with a plus sign and a dotted line. The right panel displays the JSON response:

```
{
  "data": [
    {
      "name": "John Doe",
      "id": "1234567890"
    },
    {

The screenshot shows a web browser window with the Facebook homepage. The browser's address bar displays <https://www.facebook.com>. The Facebook navigation bar includes a search box with the text "Search for people, places and things". On the left sidebar, the user's profile is visible, showing a profile picture of Min-Yuh Day and the name "Min-Yuh Day" with a link to "Edit Profile". Below the profile, a "FAVORITES" menu lists "News Feed", "Messages" (with a notification badge of 1), "Events" (with a notification badge of 2), "Photos", and "Browse". The main content area features a "What's on your mind?" status update prompt with options for "Update Status" and "Add Photos/Video". Below this, a post by Min-Yuh Day is displayed, containing the text "Hello, Facebook Graph API" and interaction options: "Like · Comment · Share · 2 minutes ago via Graph API Explorer".

Summary

- **Facebook API**
 - Facebook JavaScript SDK
 - Integrate Facebook with iOS/Android Apps
 - Facebook Login
 - Facebook Open Graph API
 - Facebook Graph API

iOS

Integrate Facebook with your native iOS apps.

Android

Integrate Facebook with your native Android apps.

Web

Integrate Facebook with your website or host your apps in Facebook.com.
